

# Bringing it all together

Create an App that looks and behaves like the screenshots below. This builds on what we have already learned.

- Use the Expo documentation for help with images and react-navigation.
  - Let react-navigation create the header.
- Use the Nativebase documentation for help with layout and typography.
- Use the React Native documentation for help with styles e.g. alignment and colours.
- *Use javascript to check if the email address has been used before and change your message to read "Your {email} is already in our mailing list".*
