

Styling your App with NativeBase

Graphic design is an important part of App development. If you are not a graphic designer I recommend using NativeBase to style your App. NativeBase makes it easy to create a theme for your app.

Close Expo on your computer if it is already running. Create a new expo project including Nativebase by following the NativeBase “getting started” documentation.

<https://docs.nativebase.io/>

Now NativeBase is installed you can experiment with the Component Library.
